

Docker

1. Open Docker Desktop

Wait until Docker starts completely.

2. Check Docker

Open PowerShell and run:

```
docker -v
```

3. Check Images

```
docker images
```

4. Pull OpenJDK Image

Use this working command:

```
docker pull openjdk:27-ea-trixie
```

Wait for download to complete.

5. Check Downloaded Image

```
docker images
```

You should see:

```
openjdk:27-ea-trixie
```

6. Run Docker Container

```
docker run --name JAVA -it -d openjdk:27-ea-trixie
```

7. Check Running Container

```
docker ps
```

8. Open JShell

`docker exec -it JAVA jshell`

You will see:

Welcome to JShell

9. Run Java Program

`System.out.println("Hello Docker");`

Press Enter.

10. Addition Program

`int a = 10;`

`int b = 20;`

`System.out.println(a+b);`

Output:

30

11. Exit JShell

`/exit`

12. Stop Container

`docker stop JAVA`

13. Remove Container

`docker rm JAVA`

14. Check Containers

`docker ps`

15. Check Images

`docker images`

16. Remove Unused Images (Optional)

`docker image prune -a`

Type:

y

to continue.
